Hi Margaret,

Until such time when we are able to fully address the potential risks of pesticides to the RPBB, I would recommend that the relevant state's MP3s adopt the voluntary conservation measures specified in the FWS Guidance on RPBB ESA Implementation.

Ex. 5 - Deliberative Process

Thanks,

Anita

Hello Philip and Anita,

I'm following up on my request from late March to let you know when we need a response. We would like to provide an update on the RPBB listing for our states in **early May (May 10-11)** during the Region 5 pre-SFIREG meeting.

Since sending the request below, Michigan has released their draft MP3 for public comment. Comments are due by **June 1** and the Michigan Department of Agriculture, Trade and Consumer Protection would like to include some recommendations for protecting the RPBB in their MP3. Would some of the steps recommended in the **RPBB Voluntary Implementation Guidance**, dated March 21, 2017, be appropriate for EPA to recommend as we

currently do not have ESPP Bulletins? For example, on page 16-17 there are some recommendations on how to address pesticide use.

Michigan's draft Managed Pollinator Protection Plan:

<https://pollinators.msu.edu/protection-plan/>

USFWS RPBB Guidance on Endangered Species Act Implementation:

<https://www.fws.gov/midwest/endangered/insects/rpbb/guidance.html#map>

I've copied Melissa, who responded some time back to a request from Ohio for similar information on how to protect the RPBB from pesticide exposure at the time the listing was proposed. (See email to me dated October 24, 2016).

Please let me know if you have any questions.

Thank you.

Margaret

Subject: FW: Listing for Rusty Patched Bumble Bee became effective on March 21, 2017

Hello Margaret,

Jeff passed along this US FWS document related to the Rusty Patched Bumble Bee listing for endangered species. I have a couple questions that I'm hoping you can help with.

1. How does the EPA plan to respond to this new Endangered Species listing? There are several ways that EPA has responded to these listings, and those range from increasing awareness to Label Changes EPA felt necessary to achieve protection of an endangered species.

Within the FWS guidelines, there is a recommendation to not allow commercial bumble bees to escape into the wild.

2. Is EPA inclined in any way to support this guideline?

In North America there are only two producers of Commercial Bumble Bees:

Koppert Biological, with facilities in Michigan and Mexico.

BioBest, with facilities in Ontario.

Both produce the eastern bumble bee *Bombus impatiens* for distribution within the *B impatiens* range (East of the Rockies). In some cases, under permit, California has allowed the import of *B impatiens* for greenhouse use, but under strict guidelines to prevent escape. (queen excluders

and the required destruction by drowning after pollination.)

Both companies are in the process of developing lines of Western bumble bees to meet the demands of western markets.

Bee diseases are a major concern for the economical production of bumble bees. As a result, testing and quality control is the rule for these businesses, commercial bumble bees fit a number of important pollination niches. Michigan's firm, Koppert Biological has taken positive steps to ensure quality and disease freedom of their stock.

Subject: RE: Listing for Rusty Patched Bumble Bee became effective on March 21, 2017

Thanks, Mike. You probably saw this earlier, but this document recommends not releasing commercial bumble bees into the wild in the RPB's range after use and to use them only in greenhouses or similar situations:
<https://www.fws.gov/midwest/endangered/insects/rpbb/pdf/10a1BGuidanceRPBB21March2017.pdf>.

If you have a chance, would you ask Margaret if pesticide labeling is going change to include ES protections regarding this species? If so, I can see a wide-ranging effect, and maybe we should mention it in our MP3's pesticide section, even if it's not a managed pollinator.

Mike Parker might be interested in this before the DNR's upcoming summit. I'm guessing he'll get pesticide-use questions.
